

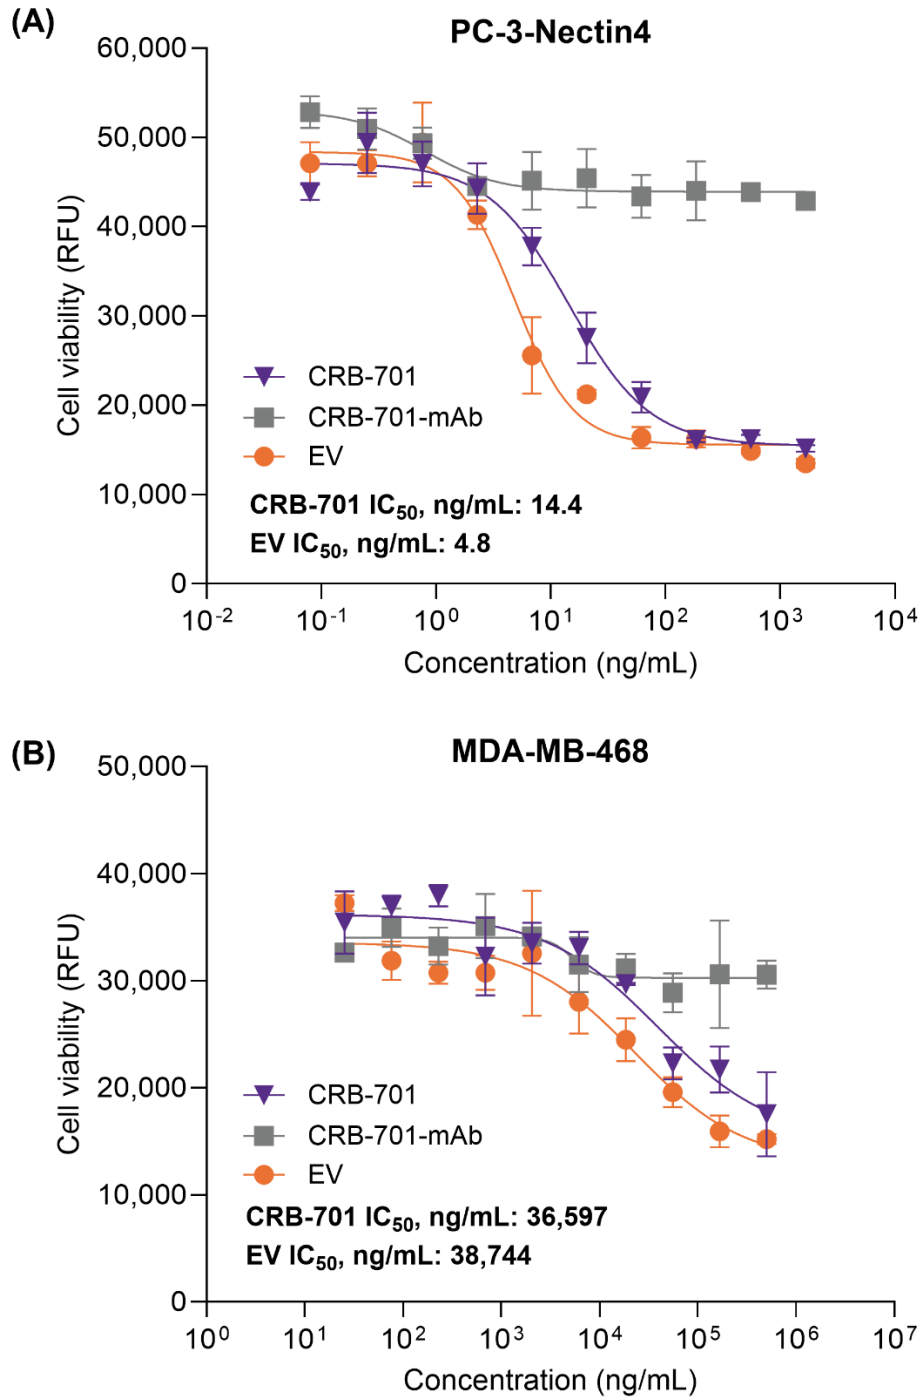

Figure S3. Cytotoxicity of CRB-701, CRB-701-mAb, and EV in (A) PC-3-NECTIN4 and (B) MDA-MB-468 cells. Cell viability was determined using a resazurin-based fluorescence assay.

EV, enfortumab vedotin; IC₅₀, concentration required to produce 50% maximal inhibition; mAb, monoclonal antibody; RFU, relative fluorescence unit.
