

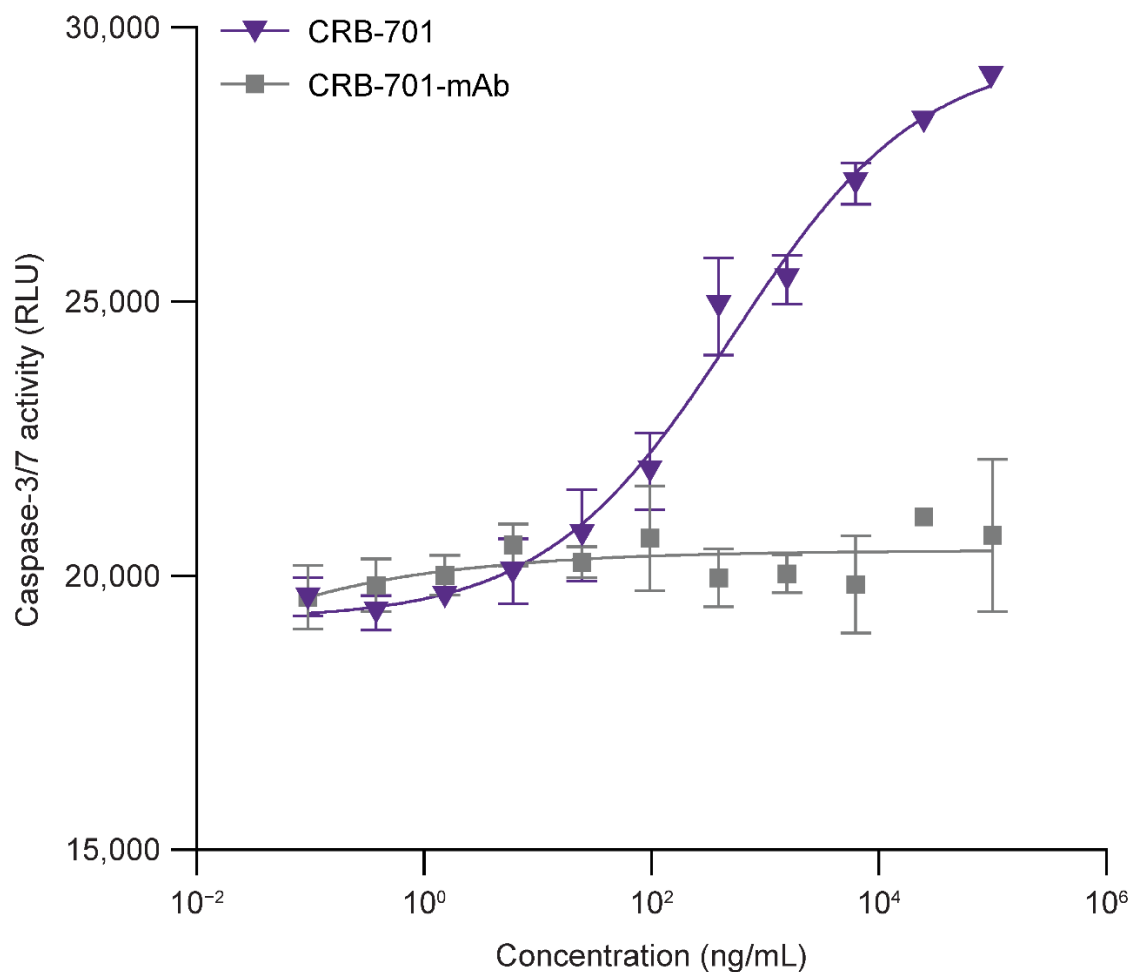

Figure S7. Effect of CRB-701 and CRB-701-mAb on caspase-3/7 activity in PC-3-NECTIN4 cells measured with a Caspase-Glo 3/7 Assay Kit. Cells were treated with CRB-701 or CRB-701-mAb for 24 ± 3 hours. Data are presented as mean $\pm$ SD from three technical replicates at each concentration; data were fit to a four-parameter model.

mAb, monoclonal antibody; RLU, relative light unit; SD, standard deviation.
