

Table S3. Effect of CRB-701-mAb and CRB-701 on 293T-NECTIN4 cell cycle distribution

Treatment	Cells in G1 phase (%)	Cells in S phase (%)	Cells in G2/M phase (%)
Vehicle	55.67	40.40	3.93
CRB-701-mAb	48.06	42.18	9.76
CRB-701	39.64	0.00	60.36

Cell cycle distribution was determined based on chromosomal content by flow cytometry using PI staining: G1 phase (2N), S phase (2N–4N) and G2/M phase (4N).

mAb, monoclonal antibody; PI, propidium iodide.
