

Table S4. Apoptosis induction in 293T-NECTIN4 cells following treatment with 10 µg/mL CRB-701 or CRB-701-mAb, or vehicle

Treatment	Live cells (%)	Early apoptotic cells (%)	Late apoptotic cells (%)
Vehicle	78.9	6.8	7.2
CRB-701-mAb	72.3	15.9	5.5
CRB-701	29.2	51.1	18.3

The proportion of live cells (PI⁻/FITC⁻), early-stage apoptotic cells (PI⁻/FITC⁺), and late-stage apoptotic cells (PI⁺/FITC⁺) was determined using flow cytometry.

FITC, fluorescein Isothiocyanate; mAb, monoclonal antibody; PI, propidium iodide.
